Introduction

- Very useful idea when confronting the following cases:

Introduction

- Very useful idea when confronting the following cases:
  1. There are two algorithms, both of which have different features, such as one has lower complexity in query and the other has lower complexity in modification.

Introduction

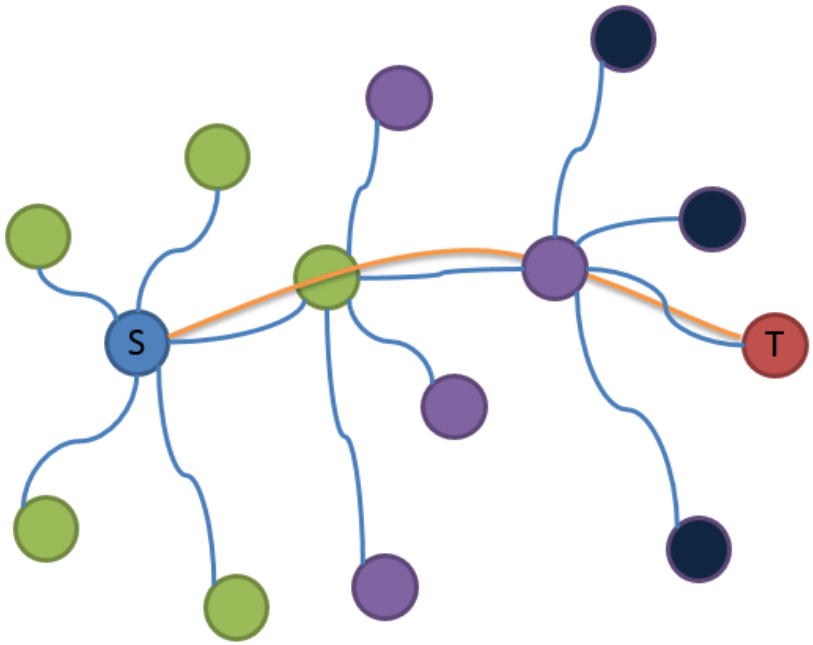
- Very useful idea when confronting the following cases:
  1. There are two algorithms, both of which have different features, such as one has lower complexity in query and the other has lower complexity in modification.
  2. The whole problem can be divided into several problems called "big problems" and these problems can be also divided into several smaller but common problems called "small problems".

Introduction

- Very useful idea when confronting the following cases:
  1. There are two algorithms, both of which have different features, such as one has lower complexity in query and the other has lower complexity in modification.
  2. The whole problem can be divided into several problems called "big problems" and these problems can be also divided into several smaller but common problems called "small problems".
- The main idea is these algorithms learning from each other.

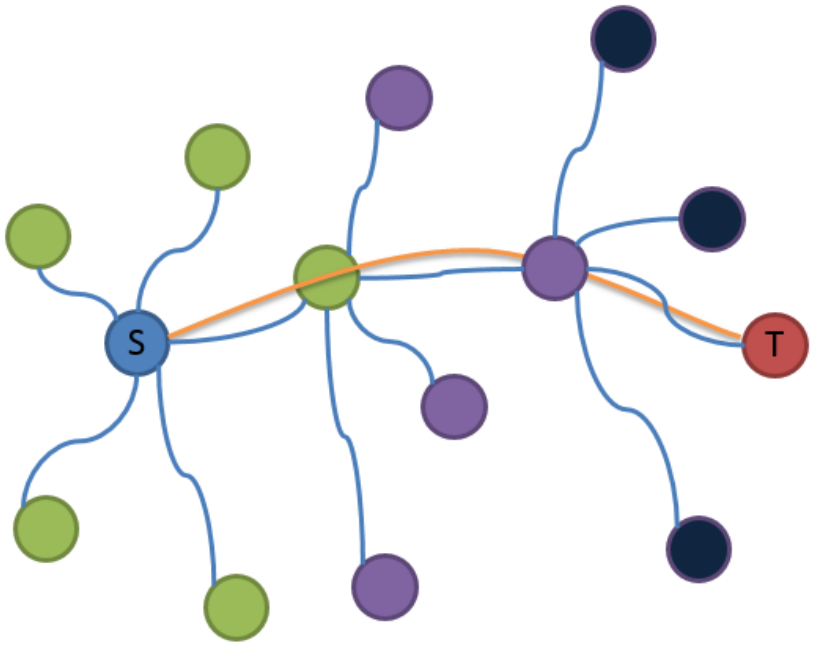
Meet in the middle

- Given an undirected graph whose nodes' degree is 5 and find a path from S to T.



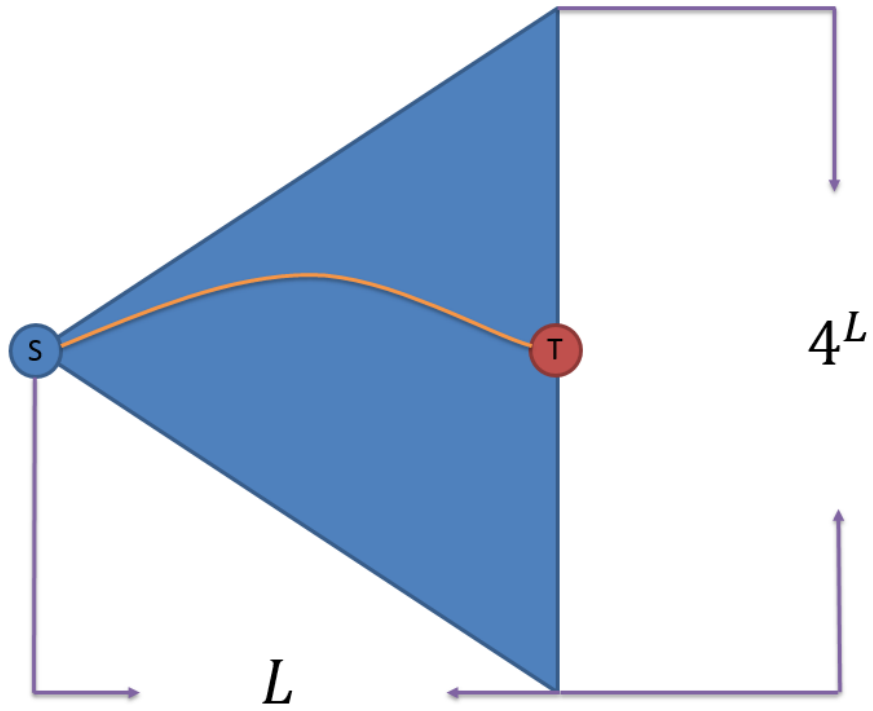
Meet in the middle

- Given an undirected graph whose nodes' degree is 5 and find a path from S to T.
- dist(S, T) = L



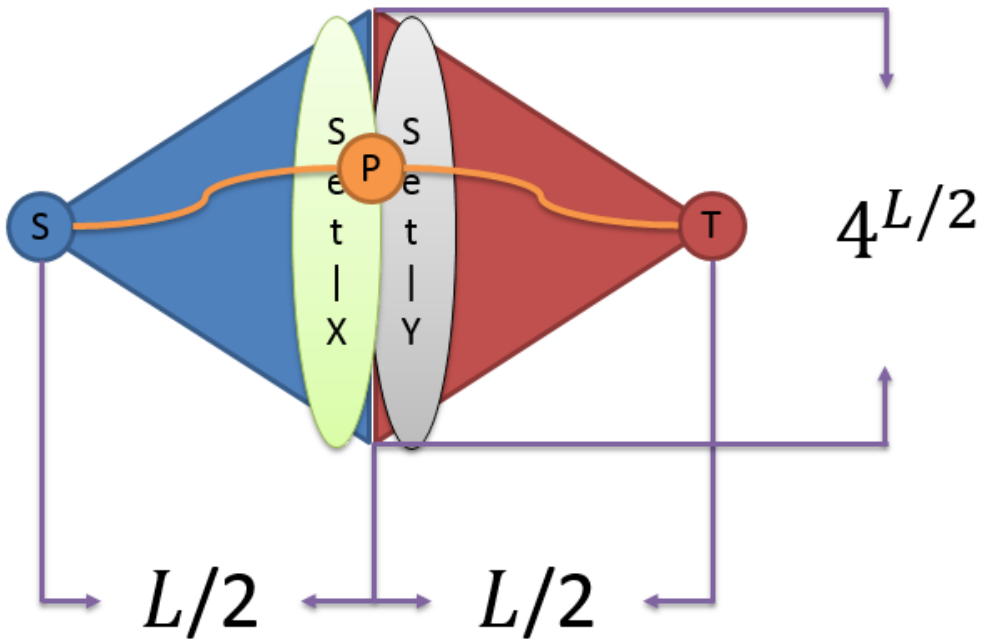
Meet in the middle

- Given an undirected graph whose nodes' degree is 5 and find a path from S to T.
- dist(S, T) = L
- $O(4^L)$



Meet in the middle

- Given an undirected graph whose nodes' degree is 5 and find a path from S to T.
- dist(S, T) = L
- $O(4^L)$
- Meet in the middle
- $O(4^{L/2})$

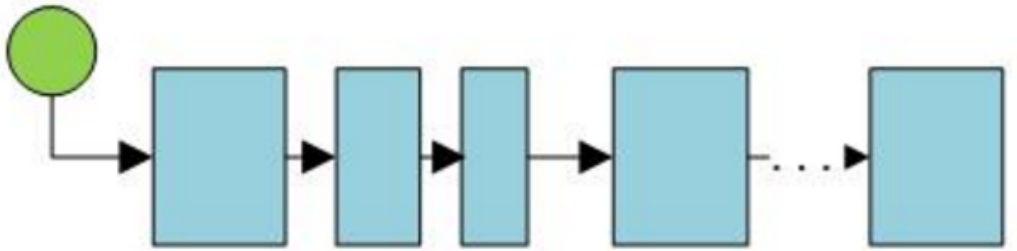


Some other applications

- Mo's algorithm

Some other applications

- Mo's algorithm
- Bolcked list



Some other applications

- Mo's algorithm
- Bolcked list
- Dinic(capacity is 1)

Some other applications

- Mo's algorithm
- Bolcked list
- Dinic(capacity is 1)
- .....

Thanks

Thanks for listening.
Questions are welcomed.
